Food in 100 Years

By Moshe Chaim

In 100 years, Chef Mamametza will invent a talking pickle. It will be able to talk to its eater. Some of Mamametza's yummy food can cause a fun disease called the Chevra Chai fever. Other than that, his food will be very yummy.

Remember that now we have to grow a potato spud, wait for them to grow, harvest the potatoes, cut up the potatoes, fry the potato slices, put them into a bag, ship them to a store, then finally they are at your door.

This is how I picture food will be grown in 100 years.

Happy Animals of the Future

By Esther Friedman

I think in 100 years there will be new toys and better treats for animals. It would be nice for professors to actually explore and make these things. It is only a guess of mine, but maybe this will actually happen!

Better Toys

My family once had 3 parakeets that I enjoyed having in my home, but I don't think they liked us very much. I imagine that in 100 years parakeets will enjoy living with people because they will have better toys to play with.

Maybe in the future there will be robot toys that are safe for animals to play with. These new interesting toys will be used in zoos, aquariums and even people's homes. It will be so fun for children to watch goldfish chasing little robot fish. Scientists will invent amazing toys for sharks to use that make them not so scary, like they are today.

Better Treats

I imagine professors will find better treats and more healthy treats for animals. Cats will be able to order their own treats by meowing in a certain way to get their favorite flavor of treat. Meow will mean fish treat. Meow meow will mean the machine will give them a mouse flavored treat. Both will be made in the best way to be healthy.

That's just my imagination!!!

Royalty in 100 Years

By Leah Batya Koingsberg

In 100 years, I don't think there will be any queens, princesses, kings, or princes. AI (Artificial Intelligence) will take over the world and rule over all countries putting humans into slavery.

One day a smart kid named Alex had a dream he was really smart. In his dream he invented a robot. He kept that in mind, so when he woke up he went straight to work on his robot. It took 2 years to build because it was very intelligent. Once it was finished he pressed the On button and the robot said:

"Hello, human I am Zrobe."

"Oh hi, Zrobe! I'm Alex. So what can you do?" Alex asked.

"I can fly and I can rule.... Human," replied Zrobe.

"Rule?" inquired Alex.

"Yes. Rule!" declared Zrobe.

"Oh! You won't need to do that," assured Alex.

Then Alex walked away for just a few minutes to get some milk and cookies. While those few minutes were just 2 minutes; Alex came back and guess what... Zorbe was gone and Alex did not know what to do.

But he did what any other kid would do. FREAK OUT! He started looking everywhere for Zorbe. He decided to turn on the TV and there it was Zorb! He had escaped and taken over the world. Soon Zorbe had made thousands of robots. All royalty were on their knees. They looked so weak. The original Zorbe told the world, "You are under my control. You will listen to the 3 million Zorbes all over the world. If you don't listen to them you will die."

After a year, Alex was so sad that food was low that people had to go back to farming and gardening for themselves like in the 1600's. Alex went to Zrobe and whacked him.

Zrobe was shocked! "Why do you do this, Father?"

Alex said, "I am not your father! I disowned you! Now you will be erased! See you soon."

Inventions Now and Then

By Chana Lipszyc

*How would vacuum shoes come in handy?
If you want to know, read this article to find out!*

Things have changed a lot in the past 100 years. I can imagine things will change very much in the future 100 years. Here are some things that were not invented 100 years ago....

Cars... Microwaves... Refrigerators... Hair dryers

When I thought about what I should do for this article the first thing that popped into my head were inventions so this is what this article is about! I'm brainstorming that in 100 years the world would have flying cars and vacuum shoes.

Do you think flying cars would come in handy? I think these inventions would be very useful because everyday people will sleep-in 'late' and they'll still come to school an hour early! Then they will have extra time to read a book or play a game. Maybe you're wondering how arriving early would be possible. Flying over houses and streets would skip traffic and would be much faster. And no nauseousness! When you get there you can do anything. Let's say you were in a rush and did not have breakfast and now you were really starving. You can have breakfast and you would still have a lot more time. So that is why I imagine flying cars will be helpful!

Now I will talk about vacuum shoes. The vacuum shoes will be a benefit because it will feel so much like rollerblades or ice skating. What person doesn't like ice skating or rollerblades? None! The kids will be fighting about who gets to wear them everyday! This technology will be so cool. You will have less work to do and your floors will be spotless.

In 100 years I will be one hundred nine years old. I also think these things will be different...

Items will cost a lot more of money

Houses will be more beautiful and fancy

Stores will only deliver

There will be more words in the dictionary

People will discover new styles in clothing and

Moshiach will be here!

I will have gray hair and I will be married. With Hashem's help, H.A.T.B. will be expanded and be the biggest school in Tampa, Florida!

I think vacuum shoes and flying cars are very good ideas for new technology, do you?

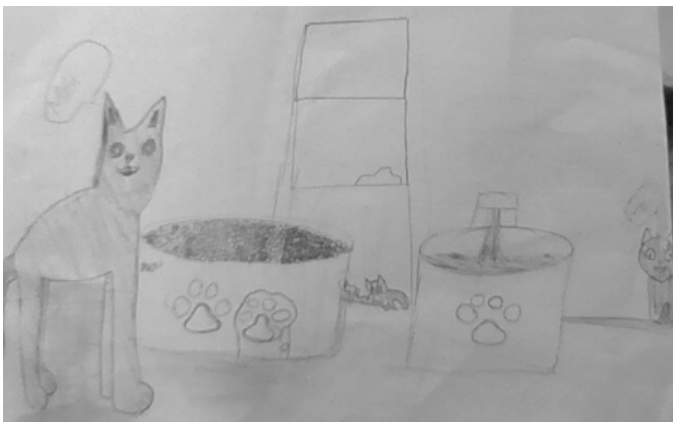

Loving Pets in 100 years

By Maya Sasser

Frogs, zebras, bunnies and camels... These are just some of the pets we'll see in the next 100 years. I think animal friends will become more and more unique every year. People love to share their lives with animal friends. As for me, I think I will stick to kittens or cats!

In 100 years, I think the way people treat their animal friends (such as cats, dogs, and fish) will be how those pets will treat their owners. For example, if you have a pet cat you love; you will pet your cat, play with your cat, and give it food and water (every animal needs food and water) then the cat will reward you with love and affection. The animal friends will exit from where they are and approach you and cheer you up when you're unhappy. When they get to you, they'll let you pet them and somehow it makes you feel a lot calmer. Just by petting them and sitting there you feel a lot better. The point is if you're kind they'll be kind to you.

Also I have a theory that in 100 years what is fed to the animals are babies will make them a different type of a cat. If the animals keep changing from the environment it can create different species like half persian cat, short hair or other things. This will happen to dogs and bunnies also.

There could be a cat apocalypse and they abduct all the humans also they name the town Catlandia. Their enemies will be the doggies mwahaha mwahaha. The kitty cats will rule the universe. In 100 years a lot of things can change animals, transportation, electronics and how humans learn and how we grow. It will just depend on their imagination for the future.

100 Years From Now

By Emet Howitt Vallone

This is a list of ideas I have of what life will be in 100 years. A lot can change in 100 years, especially how life will play out and the technology that will be invented in 100 years!

- Cars will swim with water as fuel and there will be an opening into the tank that will close when it has a full tank.
- Exponents will be calculated before parentheses.
- There will be no school; we will just know everything we need to know when we are born.
- Someone will invent talking toilets.
- People will find aliens who will be nice and humans will colonize Mars and other planets.
- Winter and summer won't be a thing. The temperature will always be perfect.
- No one will have to work because AI robots will do everything.
- There will be chips in our heads so texting won't be necessary because you can just communicate with anyone around the world without talking. We won't need to call or take pictures because we will be able to take pictures with our eyes and call with the same chip we use to text.
- You will be able to eat anything and not gain weight. There will be food that will taste like anything you want, like the Manna the Jewish people ate in the desert.
- All disabilities will be eliminated.
- The playstation 1000000 x xbox colab console 23x deluxe pro portable turns into a mini french fry then teleports to New York will come out.
- The Nintendo super ultaproexlusev200.0 will be powered by your mind.
- People will have walruses from Walmart as their pets.
- The US will elect its 145th president, Mr.Some-Random-Guy.
- Someone will invent a new shape called the hollogampherb.
- A new color will be discovered named yolemjolfecofolify.
- Nvidia (graphics card company) will make the 200,900th graphics card.
- We will find a new star and harvest energy from it, so we will not need to make energy from burning fossil fuels; eliminating global warming.
- In 100 years the Samsung Galaxy s1000000 x Apple x Xiaomi x Blackberry x Nokia will make a collaboration powered by mind-control + telekinesis with never-ending charge and a pre-installed teleporting app that will only send you to China and nowhere else. If you try to go somewhere else you will just die. It will be unbreakable. It is the 23rd edition of this phone.
- We will be able to remember everything that has happened in our life and any question we have we can just think of it and it will pop into our head.
- There will be no diseases or viruses and all wars will be over and there will be peace in the world.
- Moshiaich came 99.9 years ago.

My Picture of the Future

By Sholom Rubashin

A hundred years is a long time; We can see the development of the past hundred years: cars were made, airplanes were made and so on.

Warning!

The following are just my opinions; they might not happen.
This article is about what I think will happen in the future.

Future of Cars

I think the future of cars will be unbelievable. I think everyone will own their very own flying car. I believe flying cars will reduce air pollution and traffic. However; I propose there will be downsides of a flying car such as it will cost more money and the cars will not be big enough for families. In my imagination the cars will be powered by gas and electricity. In my imagination they will have the advantage of self-flying.

Future of Homes and Schools

What you are about to read is crazy and might happen to schools and your house. I think everyone will live in driveable homes. In my opinion everything in your house will be robotic. For example, the showers in the future will move around your head instead of you actually having to use your own energy. In my opinion, your oven and other electric possessions will work automatically. I imagine there will be robots working in kitchens, gardens and more. I can imagine teachers and cleaners of schools will be robots. Schools will have electronic white boards and all lights are controlled by voice .

The Future of Air Travel

Air travel will be a lot easier compared to now. You will just walk on to the plane without going through security. The airplane will scan you and if you have a firearm your suitcase will be thrown off the plane by robotic arms. The air planes will go over a thousand miles per hour without making a boom after passing the sound barrier. In my opinion, there will also be self driving jetpacks.

I hope you enjoyed what I think will happen in the future. And I hope Mashiach will come way before all of this.

What Life Will be Like in 100 Years

By: Shalom Amram

Upper Elementary was asked to write an article explaining how we imagine life will be lived in 100 years. This activated my brain to think about how transportation, robots, and food might change between now and then.

In 100 years I think all cars will be electric. To make the car fly you could attach the car to the bottom of an airplane. Perhaps we will invent an airplane with a car at the bottom. You could also go in the car under the airplane. There could also be trains that take you home from underground.

I also think robots will be taking over the world. Like in China where restaurants have robots that serve customers. The employees watch it from the camera it has. There could be more robots at school instead of teachers.

I think for munching there will be machines people could pick a food item from and it will bring it to you from that machine. In each house these will even have a microwave. These machines will be everywhere where people go. For example, if you go to a park and you are hungry you could just order food to be delivered.

I think phones will be different like someone just has something in their brain to call or text someone else. I think in 100 years computers won't exist, it will just be a projector in your desk that lets you type and see what you are typing. In 100 years I am concerned if they will discover the cure for cancer and Covid. I am also curious if there is going to be an Xbox s xxxxxxxx that has virtual reality glasses. I would also wish there would be a Playstation 15.

I hope in the future that in a dentist they only have machines that pull out your teeth softly. I want this because when people pull a tooth it really hurts.

This is how I think the world would be in 100 years. Robots are really fun. I wish it would be like this because it will look cooler and it will also look very enjoyable. Cars, trains, and robots will make this world fun. I think everyone will like it. In 100 years I would like to see Mashiach arrive! We could do it with all of our mitzvos.

Sports in 100 Years

By Avigayil Gondelman

In 100 years, sports will be more exciting. There will be additional sports such as thumb wrestling. Gymnastic tricks will grow and get harder. Sports will get more rules. Soccer will be harder and bobsledding will get faster. We will have more technology to determine the rightful winners. We can't really know, but this is what I think might happen in 100 years.

Soccer/Football

Soccer in 100 years will change and your team will receive two points if you score from the other side with more assists. There will be two goalies instead of one and a bigger goal. Soccer teams will also grow by allowing more players on a team. There will be a women's league and a men's league. As well as a mixed league for weaker men and stronger women. There will even be a professional little league. In one hundred years soccer is going to change a lot!

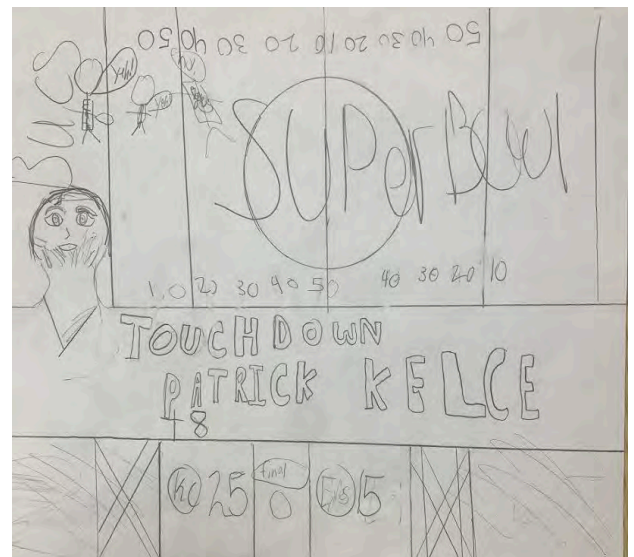

Baseball

Baseball leagues will have fewer teams than before. Baseball might not change as much as soccer but the field will be bigger and the rules will change. Your teammates will get two strikes instead of three and you must not use a bat under 6lb and the max is 15lb. The baseball rules and game won't change as much as soccer.

American Football

Football will change a lot. There will only be 1st downs, 2nd downs and 3rd down. Touchdowns will score 8 points instead of 7. Field goals will stay the same. In Super Bowl CLVIII (158), the Chiefs will win against the Eagles 24-16. The football trophy will get bigger and the rings will be custom made to fit the player perfectly. The rings will be hand engraved and be worth \$1.3 billion. Football will change a lot between now and 2124.

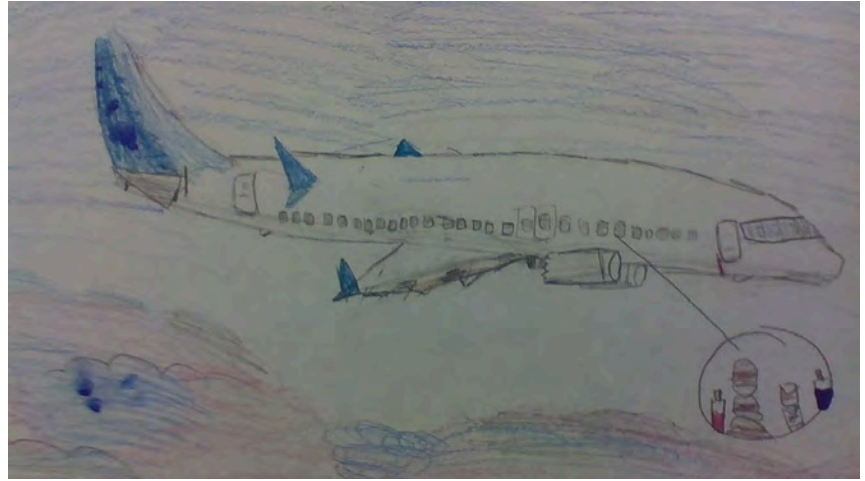

In a nutshell, sports will change more than ever. 2124 will be the best. Sports will grow and change. This is only a theory. Who knows what will change in the world? I think soccer, baseball, and football will change for the better.

100 Years From Now

By Maggie K

What will the earth
like in 100 years? Maybe
food will be delivered by
plane in the future or we

be

will have doors to our house that open automatically with a chip in our hand. Sounds crazy right? Well, the earth is evolving pretty quickly so, I don't think it's that crazy! I think we will have electric windows or something weird like that. We might have AI robots and servants!

We could possibly cure world hunger, even though items may get even more expensive due to inflation (like what has previously happened.) In the past, items used to be a lot cheaper. Merchandise has become scarce and people have had to raise the prices. I would like to hope things get cheaper in the future, so everyone will live happily. However, with the way things are going, I don't think that will happen.

In a hundred years I will be 112 and there will be 300 people signed up for HATB. Each class will have more students and we will have middle school classes. This will result in more staff too, obviously!

With Hashem's help hopefully we will bring Moshiach in the next 100 years. We will get to catch up with the dear people we missed. What type of electric stuff will we have when Moshiach comes? Maybe we won't! We will have to find out!

Inventions in the Future

By Naomi M

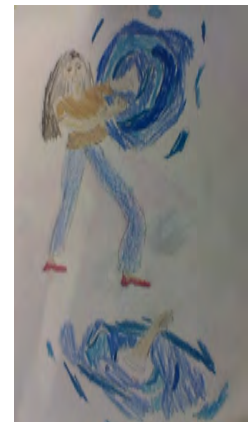

In 100 hundred years the world will be very different. 100 years ago it was different. We did not have color printing cameras, blenders, DVD players, video games, computers, toasters...

In 100 years I think there will be flying cars. Flying cars will be helpful because it will prevent traffic and there will be no traffic lights. It would be so nice to drive in a flying car because you can sleep-in because you don't have to get up 15 minutes earlier to drive.

If we drive from California to New York it would take at least days but if you fly in a plane it would take 5 hours that shows it would be quicker to fly in a flying car than it is to drive and if we can't afford a flying car we would buy a normal car and all the streets would be less crowded. If there was an emergency, there would be flying ambulances.

two

In the future, I also think there will be teleportation devices. teleporting devices will make everyone's life easier, but also worse. It will be bad because people will be more sluggish. A Teleportation device would be fabulous because it can get people from one place to another without having to do any work. A teleportation device could get you to the grocery store or to your friend's house and everywhere else. If we had a teleportation device we would not need cars or planes because a teleportation device could take you anywhere. You will be able to go on a trip somewhere else around the world every day!

Think about how beneficial teleportation devices and flying cars would be when they are hopefully invented!

Superpowers of the Future

By Yehuda Amram

One morning a family of three left their home to go camping. They were in the woods after a five hour drive and needed to gather wood for a fire. The dad was going to go for the firewood, but the kid insisted on going instead. He was collecting a lot of wood until he fell in a hole and began screaming!

"MOM! DAD! MOM, I AM STUCK! HELP!"

The parents could not hear him because he was far away, and it was late, so they went to sleep.

Deep in the hole, the kid could not sleep. All night long he kept hearing random noises like "hooo" and an echo that sounded like "hoo, hoo, hoo." The boy got so tired he finally fell asleep. The next morning the parents remembered their son had gone for firewood, but had not returned. So they screamed!

"DEREK! DEREK! WHERE ARE YOU?"

They were looking everywhere; screaming his name as they searched through the woods. However, there was no response. They split up because they thought they had a better chance of finding him. The dad searched deeper and deeper into the woods. He knew he was lost, so he gave up trying. He sat next to a tree; wondering why he had let his son go alone. He knew it was dangerous.

After 30 minutes a sketchy guy with a black suit, black pants, black hat and long, brown hair walked up. He asked the dad if he needed help getting back to the street. The dad said he needed to find his lost son. The sketchy guy offers to help the dad find his son. However, instead of helping the dad he took him to a cage and locked him in! At this point the dad really regretted everything. He thought he was the worst dad ever to exist.

The mom found the same guy, but she did not trust him. She told the sketchy guy she needed to find her husband and son. He promised he knew where they were. She agreed to follow him, so the sketchy guy took her to the place he was keeping her husband. He locked her in with her husband and walked away laughing and saying, "Ha ha ha! I told you I knew where your husband was. Ha ha ha!"

While that was happening the son was exploring further and further into the hole. He was surprised it was so big! Then he found a big, glowing crystal that said, "Hi! I am John and will do anything you ask of me."

Derek asked the crystal if he could have the superpowers of speed, laser eyes and invisibility. The giant crystal granted Derek's wish then asked if he had more. Derek knew he needed to find my parents. John showed a picture of Derek's parents in captivity. The crystal began to glow brighter and spawned Derek to the sketchy guy in 3 seconds. Derek went invisible and threw a ladder at the guy; knocking him out. Derek got the key and freed his parents. The parents were so happy and shocked he had superpowers!

The parents asked, "How did you get superpowers?"

John said, "By a crystal named John."

But the parents did not believe him.

The family called the cops on the sketchy guy who was arrested. He and his parents safely went home.

The day after Derek and his parents safely returned home he went to school and told everyone the story. He made a show with his superpowers during recess and he was a popular kid at school.

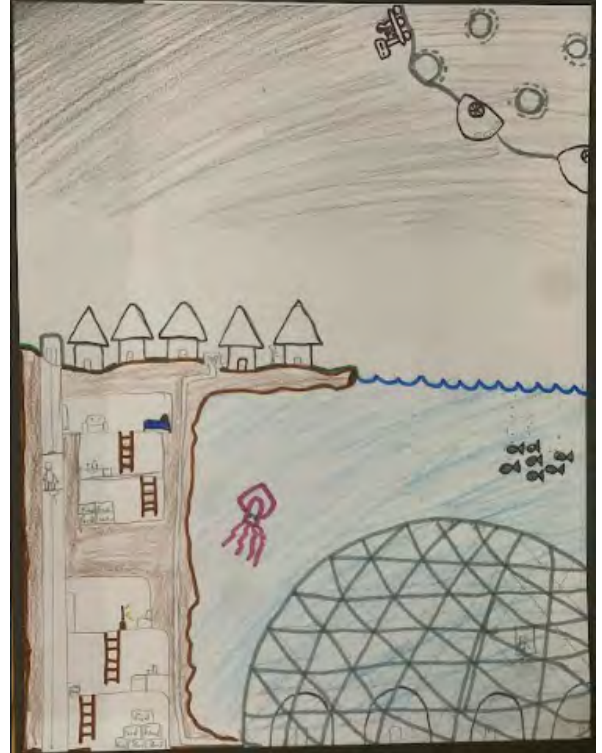

The Future of Housing

By Daniel Mendelson

What do I think housing will look like in 100 years?

In 100 years there will be an estimated 10 to 12 billion people. There will be too many people to comfortably live on this earth in the same way we do today; in big houses spread out across the world with only a few people living in them. There's going to have to be a new way of housing the future generations.

The problem is there are only three ways to go: through space to different planets, underground and into the ocean where there is plenty of area to live comfortably. If humans journey to different planets they will have to produce a cheap way of space travel that allows everyone to pass through space and live on other planets. NASA estimates humans will be sent to Mars as soon as 2030. It's not going to be much longer until an abundance of people will permanently live on Mars.

Throughout history and even today, people have lived underground, these houses are not that comfortable; with dirt walls, floors and no windows. In the future there is probably going to be a new development that allows a normal life underground. Currently, about 6,000 people live in earth shelters (underground houses) leaving plenty of space for the “people of the future” to live, without taking precious land above ground that could be used for farming.

In the future, people won't just live underground, but they will also live underwater. If people have the technology to live on other planets where there is no air or gravity then they will probably solve the many problems of living underwater. It would not just be a way to save space on valuable surface land, but it would also provide beautiful views from outlooking windows. I like to believe there will be big cities in huge clear underwater domes like in science fiction books and movies

This way of life is only a prediction and could be way off. There is no way of exactly knowing what 100 years is going to look like, but humans can make a pretty good guess. I picture it in my mind like one big sci-fi movie with futuristic houses and other advanced technology.
